Impact of Drought Conditions on Agricultural Operations

As of May 1, 2017

- Severe drought
- Moderate drought
- Minimal drought
- No impact

Data provided through the volunteer Agroclimate Impact Reporting network of producers, AAFC Science and Technology Branch staff, and Agribusiness representatives throughout Western Canada.

Qualitative surveys are performed during the last week of every month throughout March to October.

Accuracy of the map is dependent on the density of reporters in a given location.
